

KLEAR

The Drug-Testing Additive

WARNING!

KLEAR has been so successful in the past, the drug-testing industry has formed a test to detect the chemical composition of **KLEAR**. This was bound to happen sooner or later with such an effective product.

You are advised that a good number of testing facilities are detecting this product. Unless you know **ABSOLUTELY** for sure that your lab is not testing for this product, we would recommend that you use the **POWDERED URINE KIT** instead, found at testclear.com.

You can check out the best way to pass unsupervised situations, like for job tests, here:

http://www.testclear.com/store/showdetl.cfm?&DID=7&Product_ID=8&CATID=2

However, **KLEAR** still seems to remain successful for urine tests outside the United States, including Europe and Canada.

If you have any question you call us toll-free at 866-837-8253 on Monday thru Friday from 8 a.m. to 5 p.m., pacific time.

DIRECTIONS

- 1) On the day of your test, drink at least a quart of any liquid to dilute your urine. If possible, take 50 mg of vitamin B complex to color your urine.
 - 2) For the test, add one vial of **KLEAR** to each urine sample and swirl the sample to completely dissolve.
 - 3) For samples larger than 4 ounces, use two tubes of **KLEAR**.
 - 4) Do not take internally. Keep away from contact with skin or mucous membranes.
-
